

The latest CAREWare build, 594, is now available on our website at <http://hab.hrsa.gov/manageyourgrant/careware.html>

Thank you very much to all those who tested the new build. This support is critical! The new build contains a number of new features in addition to enabling the in+care Campaign performance measure #2 – medical visit frequency. Build 594 contains:

- All new RSR client lookup feature
- 2012 Poverty figures
- A new calculated field ("Date Diff") that allows you to produce the In+care Campaign performance measure #2 medical visit frequency in the last two years. See attached In+care measure #2 XML file. You will need to import it into your Performance measures module.
- Case notes editing (bug fix from build 580)

HRSA HAB strongly urges you to upgrade if you can so that you can use the new RSR client lookup feature! It should genuinely assist you in cleaning up your data and filling in some holes before you submit your RSR.

Prior to importing the new in+care Campaign performance measure, you will need to upgrade to the new CAREWare build. After you have upgraded, use the following instructions to import the #2 in+care Campaign performance measure.

- Save the attached XML file ("Inc02_594.XML") to your Desktop.
- Go into the Performance Measures Module
- Select F10 (Load from file)
- Browse to and select the XML file.
- Select the file and click import.
- Run it and make sure the numbers are accurate!

We will run a training webcast or two in the coming weeks to cover these new features and any other items of interest. Information about the training dates will be posted to the CAREWare listserv and sent to in+care Campaign participants.
